

The New Q_{5L} Lab Analyzer

Highlights

- Amazing Speed
- Multi-Constituent Analysis
- Enhanced Functionality
- No Moving Parts
- Easy Sampling
- Quicker ROI

Accurate Analysis Results in a Fraction of the Time

At ESE, our team of experts is committed to bringing you top-of-the-line solutions that will improve productivity through superior process automation - something that's key to maximizing your profits. Our newly enhanced Q5L lab product analyzer is a perfect example of how we deliver. This industry-leading analyzer couples Near Infrared Transmission (NIRT) technology with ESE's own Process Optimizer software to bring you the most accurate testing results. It's also a cinch to set up and comes available with ethernet connectivity. Here are some more ways our carefully executed upgrade has made the Q5L better, bolder and faster than ever:

Incredible Speed

- Q5L Exclusive

Forget measurements that can take up to a minute ... ESE's Q5L product analyzer gives accurate results in as fast as five seconds. That's a huge chunk of time and manpower you can dedicate elsewhere.

Multi-Constituent Analysis

Not only is the Q5L your solution for analyzing all types of processed foods, it simultaneously measures up to ten constituents including fat, protein, total solids, moisture and lactose. And the list keeps growing as we're constantly discovering new applications.

Unmatched Reliability

- Q5L Exclusive

Say goodbye to maintenance headaches. Our new version was engineered to use no moving parts which helps ensure the accuracy and repeatability of all your sample measurements.

Improved Functionality

- Q5L Exclusive

With the Q5L lab analyzer, you can measure all types of samples including liquids, solids, viscous slurries and powders using just one machine. Its unique five-position sample holder also guarantees repeatable results from one sample to the next.

Easier Use and Set-Up

As always, ESE's Q5L analyzer is extremely user-friendly. Just put your product in a sample bag, then into the holder ... there's no sample prep or clean-up required. We've also designed the software to be more intuitive, making it very easy-to-follow.

Space Saving Design

- Q5L Exclusive

You'll save much-needed lab space with the Q5L's smaller footprint. Our latest version offers a 60% reduction in size and allows you to replace several pieces of equipment with a single unit.

Optimizing the Process.
Maximizing Your Profits.

The New Q_{5L} Automation At Its Best

Since 1981, ESE has been providing superior process automation that integrates innovative analytical solutions into plants' control systems. The new Q5L product analyzer is a prime example of our commitment to this focus, as well as our team's unparalleled expertise. Contact us today to see how the Q5L can work for you.
